

Informational Only, No Action is Required

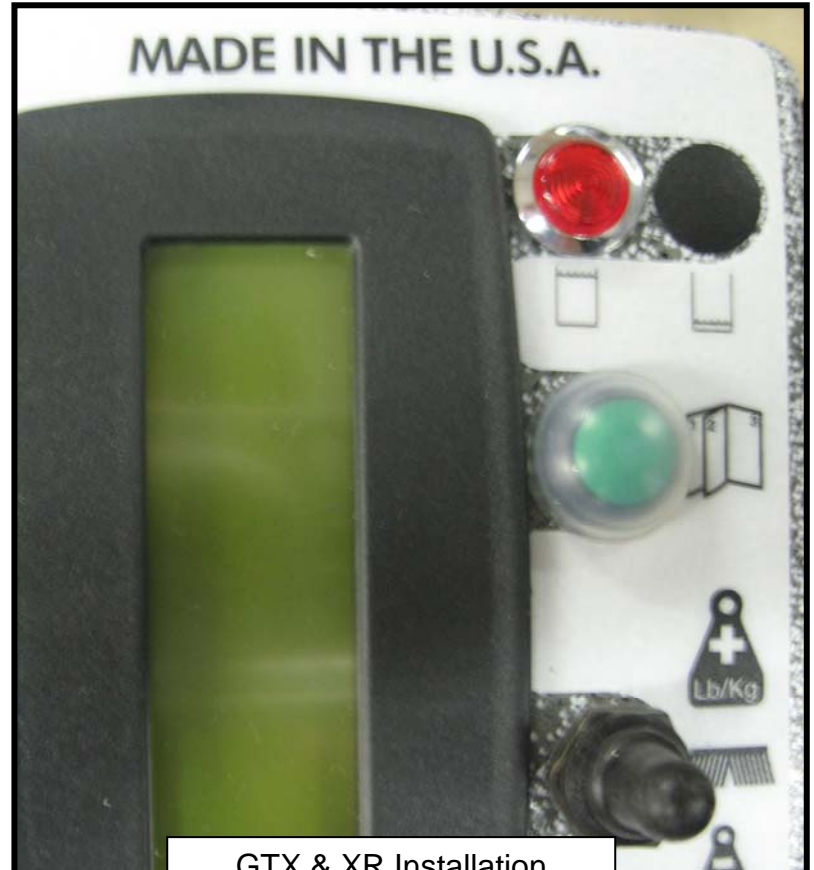

We are now protecting the green push button with a clear rubber boot that fits around the switch. The boot works well in sealing out dirt and moisture as well improving the comfort for the operator. Walk Behind units (**MiniMag, Magnum Series**) will have the on the top dash as well as on handlebar buttons. Riders (**GTX , XR Series**) will have the menu select button on top of the dash protected.

The boot can be retrofitted on older machines, by simply loosening up the button nut and then sliding the cover over the switch. The part number for the protective boot is **7-229D** and can be ordered through the parts department.
